

I support fully the Comment submitted by The American Radio Relay League concerning Docket ET 03-104. I am convinced the comments made by proponents of Broadband over Power Line (BPL) have very little, if any, credible scientific data/research to support approval of this docket at this time. Further research and technology advances in BPL will be needed to avoid the huge risk this innovative technology will not cause enormous interference to ALL services licensed to operate in the 2 MHz - 80 MHz frequency range. It is my reading of FCC regulations that further convinces me that approval of ET 03-104 would be in direct violation of existing FCC rules on non-interference and would be contrary to the best interest of the public and government radio operations.
